

Arena of Care™ Award in Inflammatory Bowel Disease

At Arena Pharmaceuticals, everything we do with a purpose, striving to fulfill the needs of patients and the communities that serve them. To surround them with support, education, and empathy. To turn aspiration into actualization. **This is our Arena of Care™.**

The Arena of Care™ Award program is a global competitive grant opportunity to fund novel programs addressing unmet needs in the inflammatory bowel disease (IBD) community. In this inaugural year, we sought ideas to help the IBD community experience happier and healthier lives. Ideas that make an impact. Ideas that turn unmet needs into opportunities that could help change lives. We're excited to announce the 2020 Arena of Care™ Awardees whose programs exemplify our vision.

Congratulations to the 2020 Awardees!

American Gastroenterological Association + About IBD

"AGA and About IBD Present: How To Be Happy & Healthy With IBD," an educational series of podcasts, blogs, and a promotional campaign bringing together gastroenterologists and patient advocates.

University of Florida College of Medicine + University of Miami

A structured, age-specific educational and engagement program targeting college-aged patients with IBD; addressing unique needs and potentially improving disease outcomes.

Crohn's & Colitis Foundation

A familiarity campaign that targets IBD awareness within the Black community.

About Arena of Care™

The Arena of Care program, founded by Arena Pharmaceuticals, was launched to recognize and fund important new and innovative initiatives that identify and support solutions for challenges facing patients with IBD and their caregivers.

This year, the global competitive grant program considered projects that sought to address the myriad of psychosocial challenges that IBD patients and their caregivers face, including improvement of support for family members of patients, assisting patients in taking greater ownership of their healthcare, and supporting the education of patients on important disease-related topics.
